

AQUAVITA

is a group of products designed for professional wood protection. All coatings consist of modern components that are resistant to UV rays and other atmospheric influences. Aquavita coatings enrich wood and provide a preventative protection against wood pests (fungi, insects) and weather effects. A wide range of products is available for the protection of all types of wood with transparent stain or opaque paint.

The presented products are applied with a brush, however products for spraying are also available. For more information, please contact your commercial representative.

AQUAVITA Maintenance set

Contains:

- AQUAVITA Cleaner
- AQUAVITA Caring Milk
- Microfibre Cloth

The **Aquavita Cleaner** is intended for removal of dirt prior to applying the Aquavita Caring Milk.

The **Aquavita Caring Milk** is a colorless emulsion for treatment of doors and windows and other surfaces protected with acrylic paints.

AQUAVITA

AQUAVITA

Caring for carpentry and joinery products

The treated surfaces need to be inspected once to twice a year to correct all possible mechanical damages. The durability of the Aquavita coatings system can be prolonged by using the Aquavita Caring Milk. Apply it once or twice a year to wooden elements using a cloth. The caring milk closes the pores and forms a light transparent protective coat on the surface of the coating.

If necessary, the coatings can be restored with the Aquavita Top Coat Brush or the Aquavita Email Brush.

Repainting

The frequency of repainting depends on the level of exposure to different weather effects, the colour shade, and mostly on the frequency of treatment with AQUAVITA Caring Milk. The average repainting period with regular treatment is longer than 5 years.
