SILVER FILLER EFFECT is the best choice when you want to embellish a piece of solid wood furniture. The final look is elegant and unique, and brings a new texture into the space.

3.

Rub it into the cracks as much as possible, remove the excess using a spatula, so it remains only in cracks. Dry the surface 1-3 hours, depending on the depth of the cracks with filler.

Sand using granulation 280-400. With bigger cracks the process of applying filler and sanding must be repeated.

For the SILVER FILLER EFFECT, we selected a table made of solid oak wood. The most suitable is cracked and gnarly wood, which we also call wild oak.

Sand the surface using granulation P 180.

1.

2.

Prepare the silver filler and apply it to the surface, where you want the SILVER FILLER EFFECT.

Using a spatula, apply the filler mostly to cracks, because this is where the effect will be the most visible.

In the final step, lacquer the surface using transparent lacquer. The most natural look can be achieved by using deep matt acrylic lacquer.

Suitable for usage after 24 hours.
